

# Read Me – Legacy Installers

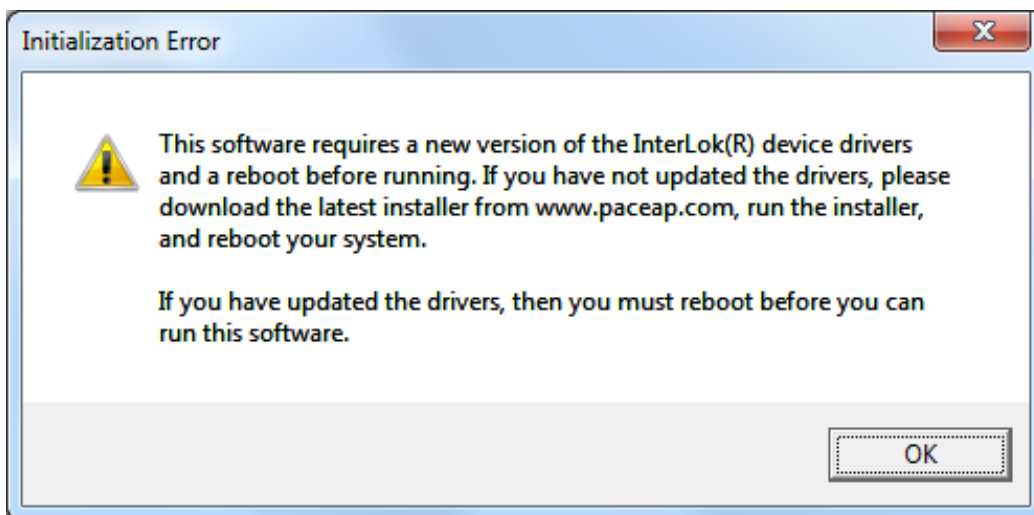

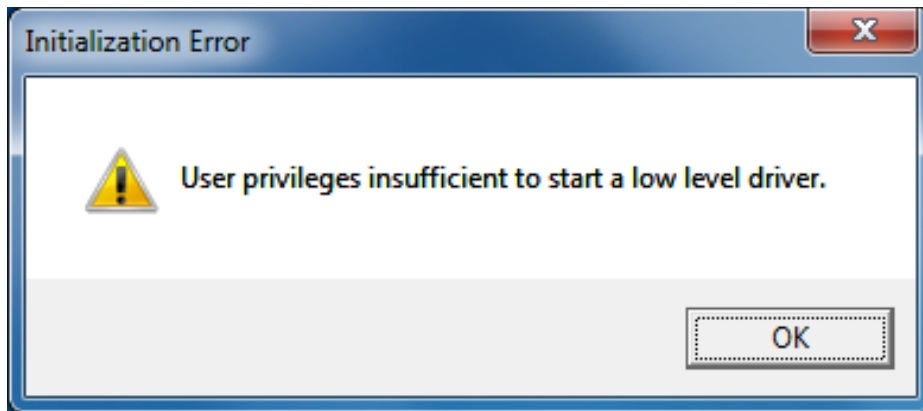

Copyright © 2016 - 2017, PACE Anti-Piracy, Inc., All rights reserved.

## Introduction

If you have older protected software, you may need to run one of our legacy installers in order to use the software.

## Do I need to install legacy software?

If you see one of the following alerts when loading older software, you'll need to install our legacy InterLok drivers:

To install the InterLok drivers, simply run the installer next to this read me called "InterLok Driver Setup Win32.exe" for 32 bit systems or "InterLok Driver Setup Win64.exe" for 64 bit systems.

## **How can I remove this software from my system?**

Older PACE protected software might not run if these files are not installed.

To remove this software, please use the control panel Add/Remove programs feature and uninstall the package named "InterLok Driver Setup".

## **How can I get support for this software?**

Most support questions and answers can be found here:

<https://www.ilok.com/support.html>

If you're having problems using or authorizing your protected software, please contact the software publisher first. They will escalate your issue to PACE as needed.
